This game is a fantastic throwback to the first three Harry Potter games by EA. As someone who played those games into the dust, I really appreciate this one. I would recommend this to anyone who enjoyed that series, as adventure RPG fans. It's not a hard game, the difficulty seems to be geared towards children aged 10-14, with linear gameplay and some sidequests. You get to run around the castle freely, meeting the other students and performing odd tasks for them in any order that you wish. It's all very fun, especially when you get challenged by some of the minigames. Sometimes I get severe freezing and lagging during battle with the follow camera enabled, but that is forewarned in the settings. All controls are re-bindable as you please. I picked this game up with a very large coupon from Steam (You know, one of those 'deals you can't refuse'), and I would say it's priced very fairly at 9.99-14.99.. This is a good action RPG with a solid storyline and decent level of customization.. Nice linear action RPG kept me busy for 24h. You can choose between close and ranged combat style. Most (if not all) conversations are voice acted, albeit a bit slow for my taste.. Really awful game, I like the class of mages but this game is so bad. The people who really enjoyed this game either played it when it came out; when there were no other better games(there were), or it's their first game ever.. Not that gpod. It's pretty cool, once you get around its awkward controls.. This game is not so bad :) B+
